OPTIMUM DESIGN OF STEEL OPEN WEB GIRDERS

By Eng. C. D. W. ALAHAKOON

This thesis is submitted to the Department of Civil Engineering of the University of Moratuwa in partial fulfilment of the requirements for the Degree of M.Eng. in Structural Engineering Design.

October 2003.

ACKNOWLEDGEMENT

I am grateful to the Vice Chancellor, Dean of the Faculty of Engineering and Head of the Department of Civil Engineering of University of Moratuwa for the permission granted for this research work. The coordinator of the postgraduate research, Dr. M.T.P. Hettiarachchi always kept me alive encouraging the completion of this research work. I wish to thank all the lecturers of the postgraduate course on Structural Engineering Design, who helped me in many ways to make this study successful. Also the knowledge gained during the lecture series was an immense help for my career.

I am especially grateful to the supervisor of the project, Dr. Mrs. M.T.P. Hettiarachchi for her dedication and commitment right through the research work.

Also I wish to thank the Department of Buildings for sponsorship, Director of Buildings and Deputy Director (Engineering Services) who granted me duty leave for post graduate diploma course and allowed me to make use of Departmental data for my project work.

I thank the librarian and the staff of the library for the co-operation extended to me for this research work.

There are many who helped this work in various ways. I regret the inability to thank them all individually. So a big thank for all those who helped to make this research project success.

University of Moratuwa, Sri Lanka.

TABLE OF CONTENTS

		Page
1	INTRODUCTION	
1.1	General	1
1.2	Objective	2
1.3	Methodology	2
2	AVAILABLE DATA	
2.1	Open web girder data used for pitched roofs	3
2.2	Available literature	4
3	ANALYSIS	
3.1	Type of open web girder considered for analysis	5
3.2	Loading	6
3.3	Analysis of the girder	15
4	DESIGN AND COSTING	
4.1	Girder design	17
4.2	Costing	24
4.3	Spreadsheet for girder design and costing	25
5	RESULTS AND CONCLUSIONS	
5.1	Results	27
5.2	Results of the alternative computer modeling methods	40
5.3	Limitations	41
5.4	Conclusions	56
5.5	References	58

ANNEXES

Annexe 1	Open web truss details
Annexe 2	Wind zone map of Sri Lanka
Annexe 3	Maximum actions on the members of the girder
Annexe 4	Flow chart for the design and costing of the girder
Annexe 5	Sectional properties of the angle sections
Annexe 6	Typical spreadsheet print out
Annexe 7	Prokon graphical representation for 18^0 pitched roof
Annexe 8	Comparison of Microfeap and Prokon actions
Annexe 9	Horizontal displacements at roller supports when one support is pinned and other is on rollers
Annexe 10	Variation of top and bottom chords actions when both supports are pinned
Annexe 11	Reactions at supports when both supports are pinned
Annexe 12	Variation of optimum member actions in optimum trusses for different modeling methods
Annexe 13	Sketches drawn to scale
