Declaration

I declare that this dissertation does not incorporate, without acknowledgement, any material previously submitted for a Degree or a Diploma in any University and to the best of my knowledge and belief, it does not contain any material previously published or written by another person or myself except where due reference is made in the text. I also hereby give consent for my dissertation, if accepted, to be made available for photocopying and for interlibrary loans, and for the title and summary to be made available to outside organizations.

Dedication

I dedicate this dissertation to my parents who gave me support when I'm studying for the Master of Science. My parents accompanied me with their love, unlimited patience, understanding and encouraging me throughout the time period. Without their support, I would never be able to accomplish this work.

Acknowledgement

I have been fortunate to have enthusiastic and generous research advisor, Professor Asoka S. Karunananda, of University of Moratuwa, whose direction and efforts helped me to produce the final outcome of this research study. His immeasurable encouragement and assistance throughout this study will always be remembered. Further, without his effort and advice this work would not have been possible.

I would like to give my heartfelt appreciation to all my lecturers, who gave their knowledge of the faculty of Information Technology, University of Moratuwa. I'd like to thank to the coordinators of the MSc course and the staff of the University of Moratuwa who gave their maximum support to me. Finally, I'd like to thank all staff of the Department of Computer Science, Faculty of Science, University of Ruhunato share my office workload with understanding my dedication to this project.

I have been fortunate to have Ms. J. Karunanayake, who gave me the fullest support, by doing the proof reading of this dissertation and correcting grammatical errors.

Abstract

The vehicle is a complex system which requires a variety of parts for appropriate functioning. Because of this complexity there are numerous things which can malfunction in a vehicle. Diagnosing malfunctioning parts and fixing those issues in vehicles are very complex and time consuming due to the varying technologies used in vehicles. According to literature, since 1980s, expert systems have been the ideal technology for the diagnosing task in physical and biological systems. However, the use of expert systems in Sri Lanka is very limited. This project presents the development of an expert system to diagnose problems in vehicles. The research mainly focused on mechanical problems which might occur in vehicles. There are variety of users that might find the system beneficial. Users of the developed system include expert mechanics, novice mechanics, drivers and vehicle owners. Managers of garages can also be benefited by this system when doing preliminary investigations.

Requirements that were needed to develop the expert system were gathered by interviewing the staff of the project sponsor. Some requirements were taken through manuals and from the Internet. Expert system has been developed by using the client server architecture. Apache Tomcat was used as the web server. To develop the expert system e2gRuleEngine shell had been used. The shell contains the knowledge base as well as the inference engine. The rules requiring for inference making are stored in the knowledge base. New rules for the knowledge base could be added by using the e2gRuleWriter. Inference engine uses forward chaining technique to infer. According to the selection by the user rules were matched and matching rules were fired and a solution was given. Working with incomplete information, provision of reasons/explanations for answers and uncertainty handling are also built into the inference engine. The developed expert system was first evaluated by the expert mechanics. By expert evaluation it could be tested whether the correct rules have been added to the system. A questionnaire was designed and it was used to check the user-friendliness and the usability of the developed expert system. A questionnaire was distributed among a sample which has taken from simple random sampling. According to the statistical analysis it can be concluded that expert system works on par with human expert with the 84% confidence.

Table of Contents

	Page
Chapter 1 Introduction	1
1.1 Introduction.....	1
1.2 Background and Motivation.....	1
1.3 Aim and Objectives.....	3
1.4 Proposed Expert System on Vehicle Problem Diagnosis.....	4
1.5 Structure of the Dissertation.....	5
Chapter 2 Expert Systems for Task Diagnosis	6
2.1 Introduction.....	6
2.2 Description about Expert System.....	6
2.3 Usage of Expert Systems.....	7
2.4 General Architecture of an Expert System.....	8
2.5 Features of an Expert system.....	9
2.6 Contribution by Others.....	9
2.7 Major Problems in Current Expert Systems in Vehicle Problem Diagnosis...	11
2.8 Summary.....	12
Chapter 3 Approach to Vehicle Problem Diagnosis System	13
3.1 Introduction.....	13
3.2 Hypothesis.....	13
3.3 Technology Adapted.....	13
3.4 Summary.....	16
Chapter 4 Analysis and Design of the System	17
4.1 Introduction.....	17
4.2 Requirement Capturing and Verification.....	17
4.3 Top Level Architecture.....	17
4.4 Functional Overview of the Proposed System.....	19
4.5 Class Diagram for the Proposed solution.....	23
4.6 Sequence Diagram.....	24
4.7 Web Based Expert System.....	24
4.8 Summary.....	25
Chapter 5 Implementation of the Diagnosis System	26
5.1 Introduction.....	26

5.2 Hardware Requirement.....	26
5.3 Software Requirement.....	26
5.4 Server Side Implementation	27
5.5 Client Side Implementation.....	30
5.6 Summary.....	30
Chapter 6 Evaluation.....	31
6.1 Introduction.....	31
6.2 Statistical Survey	31
6.3 Selection of Participants.....	31
6.4 System Testing.....	33
6.5 Interview Technique.....	33
6.6 Design of the Questionnaire	33
6.7 Reliability Assessment	34
6.8 Evaluation Result.....	35
6.9 Summary.....	38
Chapter 7 Conclusion and Further Work	39
7.1 Introduction.....	39
7.2 Conclusion.....	39
7.3 Limitations.....	40
7.4 Further Work.....	41
References	42
Appendix A: Screen Shots of the Expert System	44
Appendix B: Questionnaire	46
Appendix C: Installation Guide	48
Appendix D : Sample Code.....	50
