Senior Lecturer in Computer Science & Engineering,

University of Moratuwa

## ABSTRACT

Green concepts have been now identified as the right element to connect both corporate innovation and environmental integration. It is encouraging to identify that few Sri Lankan organizations have initiated green concepts including green IT practices. There are internal as well as external factors which motivate organizations towards 'Greening'. This dissertation identifies motivation factors for implementing green IT among forty five Sri Lankan 'Green awarded' organizations. This data can be utilized in setting green targets of the country and for the benefit of organizations who are planning to 'Go green' in future facing minimal barriers with maximum productivity.

Green awarded organizations with clear vision and mission are more focused and are more successful in retaining green concepts and green processes. In addition defining a vision & mission will help an organizational management to educate their employees and motivate them towards participating in greening their IT processes.

The results show that cost reduction and the efficiency of powering ICT infrastructure are the main motivation factors for energy efficiency and virtualization consolidation related initiatives, while asset disposal initiatives are mainly driven by organizations' sustainability strategy and corporate social responsibility. Further, market incentives are identified as the main motivational factor for travel reduction practices. However, government energy efficiency regulations, greenhouse gas regulations, regulations on discarding e-waste, and the encouragement from industry associations show very low impact on motivating organizations towards achieving green IT.

## ACKNOWLEDGEMENT

First and foremost, I would like to extend my sincere gratitude to my supervisor Dr. Shantha Fernando, Department of Computer Science and Engineering, University of Moratuwa, for his encouragement, invaluable advice and guidance throughout research.

I must appreciate Dr Malaka Walpola for the extended motivation, enthusiasm and continuous support for the data collection throughout the research.

My sincere thanks also goes to Dr Chandana Gamage, Head of the department, Department of Computer Science and Engineering, University of Moratuwa, for providing continues support and advice to carry out the research successfully.

I also would like to appreciate the support given by Madam Vishaka Nanayakkara and Miss Shiroshika for the guidance and continuous motivations for me to carry out the research successfully.

I further extend my deepest gratitude to all academic and non-academic staff of Department of Computer Science & Engineering, senior students and library staff of the University of Moratuwa for their support in numerous ways.

I sincerely thank all the participants and management in green awarded organizations for extending their support for data collection and by providing their feedback and assistance towards this research exercise. Finally special thanks to my wife Dr Hiroshi Jayathilake without her help and support this endeavor would not have been possible.

Jayathilake M.T.D.

MBA/IT/129059D
