

**BIM READINESS IN SRI LANKAN ARCHITECTURAL  
ENGINEERING AND CONSTRUCTION (AEC)  
INDUSTRY.**

Kanchana Anuruddha Galagedara

(148407F)

This is submitted in partial fulfillment of the requirements for the degree Master of  
Science in Project Management

Department of Building Economics

University of Moratuwa

Sri Lanka

November 2018

## DECLARATION

“I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also I grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis in whole or in part in print electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books)”

## **ABSTRACT**

Construction industry highly influences on improving the infrastructure industry of a country. Architectural Engineering and Construction (AEC) industry always focuses on reducing inefficiencies, enhance the productivity and increasing the communication. Construction industry is highly turbulent and complex in nature as number of suppliers, employees, materials and machinery work in a construction site. One of the major challenges in the construction industry is communication and coordination between different disciplines involved in the industry like authorities, local & foreign governments, financial authorities & institutes, engineers, architect, lawyers, quantity surveyors, contractors, suppliers, community and trades. Building Information Modeling (BIM) is currently the most common denomination for a new way of approaching the design, construction, and maintenance of buildings. According to the literature and industrial reports BIM implementation is in primary stage in Sri Lanka. The researcher aims to develop suitable framework to assess BIM readiness of construction organizations.

The researcher followed both interpretivism and positivism to conduct this research study. Because BIM is currently on a radical development around the world and also is a novel idea to Sri Lankan industry. The researcher identified several factors such as importance of management, importance of process, importance of people and importance of technology which influences on level of BIM readiness. Both qualitative and quantitative data were used to understand the practice of BIM in Sri Lanka and collect employees' view.

The research result stated that all the factors such as importance of management, importance of process, importance of people and importance of technology highly influences on BIM implementation in Sri Lanka in different perspectives.

## **DEDICATION**

I dedicated this research to my loving wife and to my family members for their commitment and cooperation for the success of this thesis.

I dedicated this thesis to research supervisor, Ch.QS.(Mr.) Suranga Jayasena, pioneer Building Information Modeling researcher in Sri Lanka for his valuable guidance and valuable assistance towards the success of this thesis and also I dedicated this thesis to Programme Director, all of my lectures, programme coordinator and colleagues for their valuable support and guidelines.

And also I would like to dedicate this thesis for all professionals who had share their experience and knowledge regarding the Building Information Modelling in Sri Lanka and also for all professionals for their effort to delivering successful Building Information Modelling implementation in Sri Lanka.

# TABLE OF CONTENT

DECLARATION .....	ii
ABSTRACT .....	iii
DEDICATION .....	iv
TABLE OF CONTENT .....	v
LIST OF TABLES .....	viii
LIST OF FIGURES .....	ix
LIST OF ABBREVIATION .....	xi
1. INTRODUCTION .....	1
1.1. Introduction .....	1
1.2. Background of the Study .....	1
1.3. Rationale .....	6
1.4. Problem Statement .....	6
1.5. Aims and Objectives of the Study .....	9
1.6. Research Questions .....	9
1.7. The significance of the Study .....	10
1.8. Document Outline .....	10
2. LITERATURE REVIEW .....	12
2.1. Introduction .....	12
2.2. Building Information Modeling (BIM) .....	12
2.3. Technological Aspects and BIM in Sri Lanka .....	16
2.4. Dimensions of Building Information Modeling (BIM) .....	17
2.5. Building Information Modeling (BIM) Implementation Process .....	18
2.6. BIM Readiness and BIM Realization .....	20
2.7. Technological Aspects and BIM in Sri Lanka .....	23

2.8.	Construction Lifecycle with BIM .....	23
2.9.	Readiness Concept.....	25
2.10.	Relevant Theories and Models of BIM Readiness .....	28

## **LIST OF ABBREVIATION**

GDP	-	Gross Domestic Product
AEC	-	Architectural Engineering and Construction
R & D	-	Research and Development
IT	-	Information Technology
BIM	-	Building Information Modelling
ICT	-	Information Communication and Technology
ICTAD	-	Institute of Construction Training & Development
LAN	-	Local Area Network
CMMI	-	Capability Maturity Model Integrated
SPICE	-	Structured process improvement for construction enterprises
GPS	-	General Practitioner Information System
BIMMi	-	Building Information Maturity Index
CAD	-	Computer Aided Design
2D	-	Two Dimensional
CDE	-	Common Data Environment
ROI	-	Return Of Investment.
