

ANALYSIS OF THE IMPACT OF TELEWORKING ON THE PRODUCTIVITY OF SOFTWARE ENGINEERS IN SRI LANKA

Theshani Madhusanka Sathsarani Vithanage

189129A

A research project submitted in partial fulfillment of the requirement for the

Degree of Master of Business Administration in Information Technology

Department of Computer Science and Engineering

University of Moratuwa

Sri Lanka

May 2020

DECLARATION

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

.....

T.M Sathsarani Vithanage
(Signature of the candidate)

Date: 24/05/2020

The above candidate has carried out research for the Masters thesis under my supervision.

COPYRIGHT STATEMENT

I hereby grant the University of Moratuwa the right to archive and to make available my thesis or dissertation in whole or part in the University Libraries in all forms of media, subject to the provisions of the current copyright act of Sri Lanka. I retain all proprietary rights, such as patent rights. I also retain the right to use in future works (such as articles or books) all or part of this thesis or dissertation.

.....

ABSTRACT

Telework can be defined as a work arrangement which allows employees to work from home or any other flexible place with flexible working hours instead of their office. For IT professionals teleworking is an ideal alternative working arrangement with their knowledge and the advance of the technology. There are a lot of studies had conducted in this area. But there are not many studies conducted in the Srilankan context. This study intends to find and analyze factors that affect the software professional's productivity when they telework in Sri Lankan IT organizations.

Based on the review of the literature on teleworking and the productivity of software professionals, teleworking is not a new concept to the world. Especially for the IT industry. It has been proved that teleworking increases the productivity of the employees. Hence this study has chosen nine factors that affect to the teleworker's productivity by analyzing the past studies. The preliminary survey has been conducted to identify the most important variables in the real software industry within the Sri Lankan context. These factors are work-flexibility, work-wellbeing, technology, effective communication, and self-regulation. The quantitative research method has been followed as a research methodology in this study. Hence an online survey questionnaire is distributed among the 500+ employees in software companies in Sri Lanka. The questionnaire has contained 38 questions. Before publishing, this survey researcher has done a reliability analysis to check the goodness and internal consistency of the questions. Descriptive analysis is utilized to describe the fundamental characteristic of the data in the research study. Pearson correlation coefficient is used to test the hypothesis of this study. Furthermore, in order to estimate the strength of the correlation between the variables, the researcher has conducted the regression analysis.

As a consequence of the investigation, it can be concluded that work flexibility work-wellbeing and self-regulation have a strong correlation with the teleworker's productivity while effective communication has a moderate impact. Even though it has a low impact, technology has a considerable impact on teleworking productivity. Furthermore, a set of recommendations are suggested to improve the teleworking productivity of software professionals in the Sri Lankan software industry. These suggestions will enable the employer to motivate his fellow employees. The motivation of software engineers directly affects the quality of the software that they develop. Thus, by implementing these suggestions while meeting the need of employees, productivity can be increased.

ACKNOWLEDGMENT

I wish to offer my profound gratitude to all those who have helped me in successfully completing my research study on "Analysis of The Impact of Teleworking on The Productivity of Software Engineers in Sri Lanka".

First and foremost I wish to express my sincere appreciation to my supervisor, Dr. Dulani Meedeniya, Senior Lecturer of the Department of Computer Science and Engineering, University of Moratuwa, for the continuous support, encouragement and guiding me into the right direction.

I would also like to thank our Project coordinator Dr. Kutula Gunasekera who gave me immense support and guidance throughout the duration of this research to make it a success.

Further, I wish to convey my extraordinary appreciation to the software professionals who helped me by filling out the online survey. Without their input, the research could not have been successfully completed. Their cooperation by answering a lengthy questionnaire is really appreciated.

I wish to acknowledge the support and great love of my family, my mother, my father, and my brother. They kept me going on and this work would not have been possible without their input.

Last but not least, I wish to pass on my deepest gratitude to every one of the individuals who helped me in many ways to this research study a success.

TABLE OF CONTENT

1. CHAPTER 1: INTRODUCTION.....	1
1.1. Background	1
1.1.1. Motivation.....	2
1.1.2. Research Scope	3
1.2. Problem Statement	4
1.2.1. Research Objectives.....	5
1.2.2. Research Significance.....	5
2. CHAPTER 2: LITERATURE REVIEW.....	6
2.1. Chapter Introduction	6
2.2. Overview of teleworking.....	6
2.3. Evolution of teleworking.....	7
2.4. Challenges and opportunities of Teleworking	8
2.4.1. Challenges of Telework	9
2.4.2. Opportunities of Teleworking.....	10
2.5. Teleworking in the Software Industry.....	12
2.6. Productivity of Software Engineer and Teleworking.....	13
2.7. Teleworking factors.....	14
2.7.1. Work flexibility.....	14
2.7.2. Work well-being	15
2.7.3. Technology	16
2.7.4. Effective Communication	16
2.7.5. Self-regulation.....	17
2.8. Testing and Analysing method.....	18
2.8.1. Descriptive analysis	18
2.8.2. Central tendency	18
2.8.3. Cronbach's alpha calculation	18
2.8.4. Pearson correlation coefficient analysis.....	19
2.8.5. Hypothesis analysis.....	21
2.8.6. Hypothesis testing methods	21
2.8.7. ANOVA test.....	22

2.8.8.	Regression Test.....	22
2.9.	Discussion	22
2.9.1.	Literature related to the teleworking factors.....	22
2.9.2.	Related Works.....	23
2.10.	Conclusion.....	25
3.	CHAPTER 3: RESEARCH METHODOLOGY.....	26
3.1.	Chapter Introduction	26
3.2.	Research approach.....	26
3.3.	Data collection methods.....	28
3.3.1.	Primary Data.....	28
3.3.2.	Secondary Data.....	29
3.4.	Sample Design.....	29
3.4.1.	Population.....	29
3.4.2.	Sample size	29
3.4.3.	Research Instruments.....	30
3.5.	Conceptual Diagram.....	32
3.6.	Hypothesis.....	33
3.7.	Pilot survey.....	34
3.7.1.	Reliability analysis.....	34
3.8.	Questionnaire	35
3.9.	Conclusion.....	38
4.	CHAPTER 4: DATA ANALYSIS	39
