FACTORS AFFECTING THE PERFORMANCE OF SYSTEM SUPPORT ENGINEERS

Jayasundara Hewage Piumi Chathurika Madugee Dabare

(179103F)

The dissertation was submitted to the Department of Computer Science and Engineering of the University of Moratuwa in partial fulfilment of the requirement for the Degree of Master of Business Administration in Information Technology.

Declaration of the candidate & Supervisor

“I declare that this is my own work and this thesis/dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgment is made in the text.

Also, I at this moment grant to the University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic, or another medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Signature:

Date:

The above candidate has carried out research for the Master’s thesis under my supervision.

Name of the supervisor:

Signature of the supervisor:

Date:

Dedication

To

My Mother

A strong and gentle soul who guided me to win my life

My uncle

For being my guardian during my every life event

My Partner

For being my life partner and my best friend and my supporter all the time

Acknowledgments

I would like to acknowledge everyone who helped me in my academic achievements. First of all, my parents and spouse, who supported me with love and understanding. Without you, I could never have reached this current level of success. Secondly, to all my lecturers and supervisor, each of whom has provided patient advice and guidance throughout the research process. Thank you all for your unwavering support.

Abstract

System Support Work is rapidly growing area in the IT industry for production systems. According to current statistics, several companies are spending one-third of the budget for their IT maintenance. It maintenance took support engineers to the IT industry. This makes the opportunity to growth of system support engineers within the IT industry, and still, it is a growing area among the IT sector. Considering experiences of support engineers, most of them facing several difficulties during career path changes, level of technical competency within other software engineers such as developers, Quality Assurance, etc. Moreover, there is a tendency to assign one engineer to a system for an extended period of support and maintenance.

The research was conducted to identify factors negatively affecting to system support engineers with their long term tenure. Personal productivity is the most crucial factor in an organization's productivity. Individual failure has a direct impact on project failure, and it will impact an organization negatively. Therefore, the importance of identifying these factors are helping to improve the productivity of the organization while motivating individual workers.

There are two main factors called intrinsic and extrinsic factors impact on employee motivation or demotivation. Intrinsic factors are characteristics of engineers, and extrinsic factors management, company culture, etc. are the effect of the factors from externally. Less challenging work, less recognition comes under intrinsic factors and rewards, promotions are some of the extrinsic factors.

As a final result of the survey, the researcher has identified that awards, monetary compensation, leadership, team collaboration, and new technologies are crucial extrinsic factors which are directly impact on system support engineer productivity. Recognition, challenging work, repetitive works is the main factors for system support engineers sensitive to their productivity.
