ABSTRACT

Prevalence of deaths of children has particularly become a global concern in strategic decision making in the field of health sector. In Sri Lanka, the risk of deaths at childhood period was higher during the past few decades. Many studies have concerned about the child mortality in various perspectives. The purpose of this study is to find the significant factors on under-five mortality and to recommend a most suitable statistical model to predict the child mortality, under aged 0-5 years of age. The secondary data was collected from the demographic and health survey (2016) conducted by the Department of Census and Statistics (DCS), Sri Lanka. Two types of statistical models: linear discriminant model and binary logistic model are statistically evaluated. Two models were evaluated with classification accuracy, ROC curve, sensitivity/ specificity and sample size variations. Both methods found that, gender of child, marital status, mother's literacy, status of antenatal care, delivery type, pregnancy duration and decision-making ability are significantly influential variables ($p < 0.05$) on the status of child mortality. According to the classification results produced by models, discriminant model correctly classified the 89.6% of grouped cases and binary logistic regression model correctly classified the 94.6% of grouped cases irrespective of the status of child mortality. With respect to the all seven indicators, it was found that binary logistic regression model was more efficient and more effective than linear discriminant model. The inferences derived can be effectively used for strategic decision making in the health sector for reducing the child mortality in the future.

Keywords: AUC, Binary Logistic Regression, Child Mortality, DHS Survey, Discriminant Analysis, Misclassification, ROC, Sample Size, SDG Goal

ACKNOWLEDGEMENT

Apart from the efforts of me, the success of this research depends largely on the encouragement and guidelines of many others. I take this opportunity to express my gratitude to the people who have been instrumental in the successful completion of this project.

First and foremost, I would like to thank to my supervisor Senior Prof. T. S. G. Peiris, Senior Professor in Applied Statistics and former Head of Department of Mathematics, Faculty of Engineering, University of Moratuwa and the Course Coordinator of M. Sc. / Post Graduate Diploma in Business Statistics (2016/2017) batch for the valuable guidance and advice. He inspired me greatly to work in this project. His willingness to motivate me contributed tremendously to this project.

Then, I wish to offer my greatest appreciations towards the lecturers and members in the staff of the Department of Mathematics, University of Moratuwa, for the admirable support, during the degree program.

I would like to express my gratitude towards the staff members of Statistical Division, Department of Census and Statistics, Sri Lanka who supported me with their kind co-operation and encouragement which helped me in completion of this project. I would like to extend my sincere thanks to all of them.

My Special thanks goes to Dr. K.J.L.Kuray and Dr.Lasantha Somarathna, who helped me at the last moment for the achievement of the successful ending of this course work.

Finally, an honorable mention goes to my family for their understandings and supports on me in completing this dissertation.

DECLARATION OF THE CANDIDATE

“I declare that this is my own work and this dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text”.

Also, I hereby grant to University of Moratuwa, the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works.

DECLARATION OF THE SUPERVISOR

The Dissertation entitled 'Modelling Child Mortality via Discriminant Analysis and Logistic Regression' has been carried out by the candidate, A.K.M.D.P. KandeArachchi (Reg. No: 168835H) for the submission of Master's Degree under my Supervision.

LIST OF ACRONYMS

Abbreviation	Description
ACCR	Apparent Correct Classification Rate
AER	Apparent Error Rate
AIDS	Acquired Immunodeficiency Syndrome
ANOVA	Analysis of Variance
AUC	Area Under Curve
BCG	Bacille Calmette Guerin
CI	Confidence Interval
CM	Childhood Mortality
DA	Discriminant Analysis
DCS	Department of Census and Statistics
DHS	Demographic Health Survey
DTP	Diphtheria and Tetanus Toxoids and Pertussis
FHB	Family Health Bureau
FLD	Fisher's Linear Discriminant
G.C.E. (O/L)	General Certificate of Education (Ordinary Level)
GDP	Gross Domestic Product
HIV	Human Immunodeficiency Virus
IGME	Inter-Agency Group for Child Mortality Estimation
IMR	Infant Mortality Rate
LDA	Linear Discriminant Analysis
LDF	Linear Discriminant Function
LR	Logistic Regression
MANOVA	Multivariate Analysis of Variance
MCH	Maternal and Child Health
MN	Million
MLE	Maximum Likelihood Estimate
MSD	Multivariate Statistical Distance
QDF	Quadric Discriminant Analysis
ROC	Receiver Operating Characteristic
SCFA	Short-Chain Fatty Acids
SDG	Sustainable Development Goal
SL	Sri Lanka
SS	Sums of Square
UN	United Nations
UNICEF	United Nations Children's Fund
VIF	Variance Inflation Factor
WHO	World Health Organization
