Dissertation submitted in partial fulfilment of the requirements  
for the degree Master of Science in Industrial Automation

Department of Electrical Engineering

University of Moratuwa

Sri Lanka

April 2021

## **DECLARATION**

I declare that this is my own work and this dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

## ABSTRACT

One of the key factor for the development of the country is the efficiency of the transport system. In Sri Lanka, 20 percent of the passengers travel by the train. The demand for the rail transportation systems have been increased by the increment of rail transportation facilities and the population. Recently rail transport was introduced to Sri Lanka in 1864 to transport goods, but currently popular for the passenger transportation.

The railway signaling system is used to cater the traffic issues by utilizing the limited resources such as trains and tracks. The loss due to the failure of the signal system is substantial, as this result in the loss of human lives and human hours in addition to the loss of damages to properties. For the reliable signaling system main input is train detection.

Currently Sri Lanka Railway hasn't got a proper Failure diagnosis and maintenance reporting system. Therefore, it is essential to have a system to ensure that railway signals are reliable and safe.

The research is based on an intelligent fault detection method on railway signal color light signals. Before commencing the research, several literature surveys had been done on railway signalling and railway fault diagnosis methods, railway signal maintenance and signal fault detecting mechanism. Moreover attention was placed on other industrial intelligent fault diagnosis methods. A brief go through on signal aspect circuits, circuit relays and relay theories, would help find out the most suitable method for fault detection.

To carry on the research many color light signals inputs, outputs were obtained and surveys were done on different signal lamps, signal poles, signal aspect faults and faulty ranges in each red, amber, green circuits were identified. Mainly research was done by a case study, from the three signal aspect pole 263 where located in Colombo- Fort yard. All the data of case study 263, three signal aspect pole's data was recorded manually and the current and voltage reading fault ranges in each red , amber, green circuit's electric

components were observed. Considering observed data and survey data model is implemented for the case study.

The Model is implemented with three input subsystems and six outputs. The proposed model uses a fuzzy system and the model is design by MATLAB Simulink system. Fuzzy system is developed using the “mamdani” technique.

The system is tested with actual readings for different faulty modes and justified that model output result and actual readings are accurate. The final develop model shows that the proposed method has the capacity to find faults in each Red, Amber and Green color light circuits.

*Key words: Fault detection, fault diagnosis, fuzzy logic, Signal aspect, Signal aspect pole, MATLAB, Railway*

## **DEDICATION**

I dedicate my M.Sc. research dissertation to my beloved parents for their guidance given throughout my life.

## **ACKNOWLEDGEMENT**

I would like to give my sincere gratitude to my project supervisor Prof. Buddhika Jayasekara for his continuous guidance and support and the motivation throughout the research to develop the result in to a fruitful outcome.

Support I received from my office environment is great and never forgotten.

I would like to thank the Chief Engineer Signal and Telecommunication sub department, Mr J.I.D Jayasundara. Special thanks to Deputy Chief Engineer Signal and Telecommunication Mr V.C.D Jayasekara who given me continuous guidance to success this research.

I would like to sincerely thank for the kind cooperation of Signal Supervisor Mr T.L Padmarajan and all my friends who helped me and encouraged me this programme by extending their support.

Finally, my special thanks to my beloved parents and family members for supporting me during the research period.

M.A.Nadeera Sugandi

## TABLE OF CONTENTS

DECLARATION .....	i
ABSTRACT .....	ii
DEDICATION .....	iv
ACKNOWLEDGEMENT .....	v
LIST OF TABLES .....	xi
LIST OF ABBREVIATION .....	xii
CHAPTER 1 .....	1
INTRODUCTION .....	1
1.1    General and Back Ground .....	1
1.2    Railway Signaling System.....	1
1.2.1    Sri Lanka Railways Signaling Maintenance & Rectification Mechanism...3	
1.2.2    Typical Signal Circuit used in Sri Lanka Railway.....	5
1.2.3    Signal Process .....	5
1.2.4    Signal Aspect Circuit .....	8
1.2.5    Relay Theory.....	9
1.3    Research Initiating Statements .....	12
1.4    Objective .....	12
1.5    Methodology .....	13
1.6    Justification of Methodology.....	14
1.6.1    Alternative Approaches for Failure Monitoring .....	14
CHAPTER 2 .....	16
LITERATURE SURVEY .....	16
2.1    Researches Based on Rail Way Fault Diagnosis And Intelligent Control System 16	
2.2    Summary of Literature Review .....	23
2.2.1    Advantages of the Proposed System.....	23
CHAPTER 3 .....	25
SYSTEM MATHEMATICAL MODEL .....	25

3.1	Case Study 263 Experimental Data.....	25
3.1.1	Red Bulb .....	30
3.1.2	Amber Bulb.....	32
3.1.3	Green Light .....	34
3.1.4	Amber Bulb Rule Base.....	36
3.1.5	Green Bulb Rule base.....	36
3.2	Justification of Fuzzy Values with Observed Data of Case Study – Signal Pole 263 37	
CHAPTER 4 .....		41
SYSTEM DESIGN AND DEVELOPMENT .....		41
4.1	Experimental Data.....	41
4.2	Fault Detection and Diagnosis Methodology .....	44
4.3	Fuzzy Model for fault detection .....	45
4.3.1	Software Design Consideration: Fuzzy Logic Controller Design.....	46
4.4	Red Bulb Rule Base .....	54
