The above candidate has carried out research for the Masters thesis/ dissertation under my supervision.

Signature of the supervisor: Date:

Dr Neelanie Nanayakkara

Senior Lecturer

Department of Finance, Faculty of Management Studies and Commerce

University of Sri Jayewardenepura

Signature of the second supervisor: Date:

Mr Rohana Dissanayake

Senior Lecturer/Head of the Department

Department of Mathematics, Faculty of Engineering

University of Moratuwa

ACKNOWLEDGMENT

First and foremost, I offer my sincerest gratitude to my supervisor, Dr Neelanie Nanayakkara, who accepted to supervise my thesis and supported me throughout my thesis with her patience and knowledge. She shared thoughtful suggestions and valuable comments on my work. Her guidance helped me throughout the research and writing of this thesis. Without her, this thesis could not have been completed. Many thanks also go to my second supervisor Mr Rohana Dissanayake, who has given me constructive suggestions throughout the process of my study.

I would like to express my thanks to my colleagues for their support and all the fun we have had over these past few years. My special thanks to Mr. Rohana Dissanayake, the former course coordinator, an excellent lecturer, and Dr Miuran Jayaweera, the present course coordinator, for their unselfish and patient guidance, and encouragement in so many ways.

Most importantly, none of this could have happened without my family. My grateful thanks go to my mother, and siblings who always provided me with support and understanding.

Finally, I would like to thank everybody who was important to the successful realisation of my thesis, as well as expressing my apology that I could not mention personally one by one.

Any remaining errors are mine.

ABSTRACT

This study examines the impact of COVID-19 pandemic, the resulting investor sentiment in determining stock returns of different sector portfolios, namely, healthcare, telecommunication, banking, insurance, and hotel companies in the Colombo Stock Exchange (CSE), Sri Lanka in the year 2020. The empirical work is drawn on two widely used event study and regression-based econometric analysis. Firstly, the event study methodology focuses on the impact on sector portfolio returns after the World Health Organisation (WHO) declared COVID-19 as a global pandemic on 11th March 2020. Statistically significant positive cumulative average abnormal returns (CARs) are observed surrounding the event day. The most striking phenomenon is positive and persisting CARs perceived after a long Island-wide lockdown curfew, which imposed with effect from 16th March 2020, is lifted on 11th May 2020. CSE investors are likely to be more sensitive to local events than to global news, and persisting CARs indicate market inefficiency. A second-stage regression-based methodology is adopted to evaluate the impact of pandemic related news and to identify the influence of investor sentiment on sector portfolio returns and its persisting effects. Results reveal an initial negative sentiment effect on portfolio stock returns, followed by a positive sentiment thereafter. Initial negative effect is relatively robust on banks and hotel sector stock returns. A positive sentiment might emanate from over-reaction to the subsequent rebound with the removal of lockdown curfew and the Government's COVID-relief moratorium packages offered to businesses. Results indicate that CSE investors are likely to react with investment decisions based on psychological bias or sentiment, signifying irrational investor behaviour in CSE. This study provides current findings of investor sentiment, provoked by COVID-19 pandemic, on different sector portfolio returns in the frontier market, CSE, Sri Lanka.

Keywords: COVID-19 Pandemic, Frontier Market, Investor Sentiment, Market Efficiency
