ABSTRACT

Open sun drying is the widely used passive method for black pepper drying, but due to its limitations such as unavailability on rainy days, lack of controllability, degradation of food quality, loss of volatile oil, and improper drying, the active dryers have become more popular than the open sun drying method. Among these active dryers, tray dryers are extremely popular in medium and small-scale black pepper processing industries because they are small in size, simple in design and lower capital cost comparative to other dryers. It is extremely important to identify the optimum drying temperature and the hot air velocity for black pepper drying process on a convective tray dryer to minimize the total energy while improving the quality of the black pepper. The drying properties of black pepper were examined in a convective thermal tray dryer during this investigation. In house built experimental setup was used to understand the variations of moisture ratio (MR) during the drying. The experiments were carried out in different temperatures of 50 °C, 55 °C and 60 °C and, for three different air speeds of 0.4ms⁻¹, 0.8 ms⁻¹ and 1.2 ms⁻¹. The observed experimental results were fitted with the existing drying models. Model coefficients and constants were evaluated by using the MS Excel software. The Logarithmic model was discovered as the best drying model to explore the black pepper drying on a convective hot air tray dryer with an average RMSD (root mean square deviation) of 0.0140. The total amount of time required to decrease the moisture content (MC) to 12% (minimum secure storage MC) in dry basis under various drying settings were computed using the logarithmic model equation. The total drying energy required to dry 1 kg of raw black pepper for different drying conditions was calculated and, a surface plot of total drying energy against temperature and air speed was generated. Based on the contours of the surface plot, the drying conditions which minimize the total drying energy were determined.

ACKNOWLEDGMENT

This research was carried out under the supervision of Dr. Wijewardane M.A, Senior Lecturer, Department of Mechanical Engineering, University of Moratuwa. I am highly indebted to Dr. Wijewardane M.A for her guidance and supervision as well as for providing necessary information. I would like to express my gratitude towards Dr. Nissanka N.A.I.D for the continuous engagement with the students to complete the research. Finally, I would like to acknowledge all lecturers and teachers that imparted values and knowledge to us.

TABLE OF CONTENT

ABSTRACT.....	I
DECLARATION	III
ACKNOWLEDGMENT	IV
TABLE OF CONTENT	V
LIST OF FIGURES	VIII
LIST OF TABLES	X
CHAPTER 1 INTRODUCTION	1
1.1 Definition of food drying and objective of food drying.....	1
1.2 History of food drying.....	1
1.3 Black pepper (Piper-nigrum) Drying	2
1.4 Tray dryers for Black pepper Drying	3
1.4.1 Energy utilization in tray drying.....	4
1.5 Problem statement.....	4
1.5.1 Aim	5
1.5.2 Objectives	5
1.5.3 Scope	5
1.5.4 Outcomes of the study	6
1.5.5 Outline of the study	6
CHAPTER 2 REVIEW OF THE LITRATURE.....	7
2.1 Types of water in food material	7
2.1.2 Adsorbed water.....	7
2.1.3 Bound water.....	8
2.2 The measure of moisture content in a food material.....	8
2.2.1 Relationship in between dry basis moisture content and wet basis moisture content.....	9
2.2.2 Equilibrium moisture content	9
2.2.3 Moisture ratio (MR).....	10
2.3 Water activity of a food material.....	11
2.4 Hot air drying Mechanism.....	13
2.4.1 Transfer of heat from hot air to the food material	13
2.4.3 Transfer of evaporated moisture with the hot air	15
2.5 Drying Rate curves.....	16
2.5.1 The typical variation of drying rate with the drying time for a food material.....	17
2.5.2 The typical variation of moisture ratio with the drying time.....	18
2.5.3 The typical variation food temperature with the drying time	18

2.6 Thin layer drying	19
2.6.1 Thin layer drying models.....	19
2.6.1.1 Theoretical drying models	20
2.6.1.2 Semi-theoretical drying models	20
2.6.1.3 Empirical models	22
2.6.3 Thin layer drying experimental setup to determine the drying rate curve.....	24
2.7 Effective moisture diffusivity (D_{eff}) calculation	24
2.7.1 Activation Energy calculation (E_a).....	26
2.8 Total drying time Calculation	26
2.9 Energy utilization in convective hot air drying.....	27
2.9.1 Total drying energy	27
2.9.2 Percentage wise energy consumption in convective hot air drying.....	27
2.9.2 Total thermal energy in hot air drying.....	28
2.9.3 Allocation of energy in drying process.....	28
2.10 Food Dryers.....	29
2.10.1 Classification of dryers	29
2.11 Effect of drying on food quality	34
2.11.1 Drying non uniformity.....	34
2.11.2 Loss of volatile substances	34
CHAPTER 3 RESEARCH METHODOLOGY	36
3.1 Selection and preparation of raw black pepper for the experiment.....	36
3.2 Experimental Set-up.....	36
3.2.1 Experiment Procedure	37
3.3 Determination of air velocity through the food trays.....	38
3.5 Determination of pepper particle size	39
CHAPTER 4 RESULTS AND DISCUSSION.....	40
4.1 Determine the initial moisture content of the Black pepper	40
4.2 Results from the drying experiments	41
4.3 Selection of best fit drying model	46
4.3.1 Calculation of Moisture ratio.....	47
4.4.2 Experimental data fitting with drying models	54
4.4.3 Details of the experimental data fitting with logarithmic drying model for drying at 50C and drying air velocity of 0.4m/s	58
4.4.4 Details of the experimental data fitting with logarithmic drying model for drying at 50C and drying air velocity of 0.8m/s	59

4.4.5 Details of the experimental data fitting with logarithmic drying model for drying at 50C and drying air velocity of 1.2 m/s	61
4.4.6 Details of the experimental data fitting with logarithmic drying model for drying at 55 C and drying air velocity of 0.4 m/s	62
4.4.7 Details of the experimental data fitting with logarithmic drying model for drying at 55 C and drying air velocity of 0.8 m/s	64
4.4.8 Details of the experimental data fitting with logarithmic drying model for drying at 55 C and drying air velocity of 1.2 m/s	65
4.4.9 Details of the experimental data fitting with logarithmic drying model for drying at 60 C and drying air velocity of 0.4 m/s	67
4.4.10 Details of the experimental data fitting with logarithmic drying model for drying at 60 C and drying air velocity of 0.8 m/s	68
4.4.11 Details of the experimental data fitting with logarithmic drying model for drying at 60 C and drying air velocity of 1.2 m/s	70
4.3 Total Drying time	71
4.4.1 Calculation of moisture at optimum safe storage limit.....	71
4.4.2 Calculation of total drying time	71
4.5 Total Drying Energy	73
4.6 Effective moisture diffusivity (D_{eff}) calculation	75
4.7 Activation energy (E_0) calculation	78
CHAPTER 5 CONCLUSIONS	80
