Thesis/Dissertation submitted in partial fulfillment of the requirements  
for the degree Master of Science

Department of Mathematics

University of Moratuwa

Sri Lanka

August 2022

## DECLARATION

I declare that this is my own work and this thesis/dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

## ABSTRACT

The Brownian motion is a Mathematical concept which European botanist Robert Brown introduced in 1827 to study the behaviour of molecules. The Brownian motion concept was transformed into many versions, and Geometric Brownian Motion (GBM) and Geometric Fractional Brownian Motion (GFBM) is the latest transformation of this concept. The GBM and GFBM are mathematical models used to forecast prices of stocks, commodities, etc. In this study, the GBM and GFBM were tested to estimate the share prices of telecommunication industry companies in Sri Lanka. The two sample companies were selected by representing 18% of the population of the telecommunication industry group. The five-year share prices were collected from sample companies: Sri Lanka Telecom PLC and Dialog Axiata PLC. The two models were implemented by estimating parameters such as the drift, the volatility, probability measurement and the time interval. In addition, the Hurst component was generated by a MATLAB program for GFBM. This study is concluded that GBM is the most accurate model for forecasting share prices of the telecommunication industry group with minimum mean absolute percentage error (MAPE).

**Affectionately dedicated**  
**to My Loving family members**  
**for their enthusiastic encouragement,**  
**which always helped me to achieve success**  
**in my life.**

## **ACKNOWLEDGEMENT**

I would like to express my heartfelt gratitude and sincere thanks to my supervisor Mr. Rohana Dissanayake for giving me much of his precious time carefully supervising and guiding me throughout the study. In addition, I am very thankful for his lectures on Financial Mathematics which was very useful for understanding key concepts of this study. Secondly, I would like to thank the course coordinator, Dr. J.A.D. Miuran Dencil for his assistance in completing this research.

My warmest appreciation goes to my loving father and mother, Siripala Athukorala and Jayantha Amarasinghe, who are the giant partners in my success. This will be only a dream without my loving parents. I'm also very thankful to my two sisters Laxmi Athukorala and Dilani Athukorala and my two brothers-in-law Neluka Karannagoda and Chulaka Perera for standing with me every up and down in my life. Last but not least my sincere thank goes to my two little angels Thinaya Karannagoda and Enuke Perera for making me always happy.

# TABLE OF CONTENT

## Chapter 1 : Introduction

<b>1.1. Background.....</b>	<b>1</b>
1.1.1. Stock Exchange .....	1
1.1.2. Sri Lanka Telecom PLC .....	3
1.1.3. Dialog Axiata PLC .....	3
1.1.4. Brownian Motion Concept.....	3
<b>1.2. Objectives.....</b>	<b>4</b>
1.2.1. Primary objective .....	4
1.2.2. Specific objectives.....	4
1.2.3. Research question.....	4
<b>1.3. Significance of the study.....</b>	<b>5</b>
<b>1.4. Research outline .....</b>	<b>5</b>
<b>2.1. Introduction.....</b>	<b>7</b>
<b>2.2. Conceptual Framework.....</b>	<b>8</b>
<b>2.3. Theoretical Literature .....</b>	<b>10</b>

## Chapter 2 : Literature Review

2.3.1. Random Walk (Drunkard's Walk) .....	10
2.3.2. Brownian Motion (Wiener Process).....	10
2.3.3. Generalized Random Walk .....	11
2.3.4. Stock Return.....	11
2.3.5. Ito's Lemma .....	12
2.3.6. Solution of Stochastic Differential Equation (SDE) .....	12
2.3.7. Drift & Volatility.....	13
2.3.8. Log Normal Distribution .....	14
2.3.9. The Hurst Component .....	14
2.3.10. Geometric Fractional Brownian Motion Model.....	15
2.3.11. Drift & Volatility with Hurst Component.....	15
<b>2.4. Empirical Literature .....</b>	<b>16</b>

## Chapter 3 : Methodology

<b>3.1. Introduction.....</b>	<b>19</b>
<b>3.2. Research Philosophy.....</b>	<b>20</b>

<b>3.3. Research Approach .....</b>	<b>20</b>
<b>3.4. Methodological Choice .....</b>	<b>20</b>
<b>3.5. Research Strategy .....</b>	<b>21</b>
<b>3.6. Time Horizon .....</b>	<b>21</b>
<b>3.7. Data Collection &amp; Analysis .....</b>	<b>21</b>
3.7.1. Population .....	21
3.7.2. Sample .....	23
3.7.3. Sampling Method .....	24
3.7.4. Data Collection Method.....	25
3.7.5. Tools .....	25
<b>3.8. Analytical Framework.....</b>	<b>25</b>
3.8.1. Geometric Brownian Motion (GBM) Model.....	25
3.8.1.1. Calculation of Annual Volatility .....	26
3.8.1.2. Calculation of Annual Drift .....	27
3.8.1.3. Calculation of Probability Measurement .....	27
3.8.2. Geometric Fractional Brownian Motion (GFBM) Model .....	27
3.8.3.1. Calculation of Hurst Component .....	28
3.8.3.2. Calculation of Volatility with the Hurst Component .....	29
3.8.3.3. Calculation of Drift with the Hurst Component.....	29
3.8.3. Calculation of Mean Absolute Percentage Error (MAPE) .....	30
<b>Chapter 4 : Analysis</b>	
<b>4.1. Descriptive Statistical Analysis .....</b>	<b>31</b>
4.1.1. Graphical representation of actual data .....	32
<b>4.2. Geometric Brownian Motion (GBM) &amp; Geometric Fractional Brownian Motion (GFBM) Model.....</b>	<b>34</b>
4.2.1. Graphical representation of forecasted data.....	35
<b>5.1. Discussion.....</b>	<b>38</b>
<b>5.2. Conclusion .....</b>	<b>39</b>
<b>5.3. Recommendations.....</b>	<b>40</b>
<b>5.4. Recommendations for Further Researches .....</b>	<b>40</b>
<b>Bibliography .....</b>	<b>41</b>
<b>Appendix A</b>
