

**DEVELOPMENT OF AN ELECTRIC SPRING FOR  
VOLTAGE MANAGEMENT IN LV NETWORK AS A  
CONSUMER LEVEL SOLUTION**

Abdul Aziz Hafeel

(178610A)

Thesis submitted in partial fulfillment of the requirements for the  
degree of Master of Science in Electrical Installation

Department of Electrical Engineering

University of Moratuwa  
Sri Lanka

January 2023

## DECLARATION OF THE CANDIDATE AND SUPERVISORS

I declare that this is my own work, and this thesis/dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (Such as articles or books).

## **ABSTRACT**

LV consumers are encouraged to invest on roof top solar and wind turbines to reduce the stress on the utility side. Due to the intermittent nature of these distributed generators the stability of the power system and the power quality has become the major concerns for the utility companies to control. Electric Spring is a modern power quality improvement device which is able to support and regulate voltage events caused mainly due to distributed generators such as wind and solar to the LV feeders without the need of restrictions and control by the modern utility providers.

A detailed literature content is presented to give a brief understanding of the applications of electric springs and comparison with other similar devices available at present market.

The study was performed in MATLAB/Simulink platform for feasibility of a developed customized electric spring tested for an LV network consumer considering its future load expansions. The study was tested for voltage disturbances such as voltage fluctuations and for voltage sags and swells. A detailed comparative simulation was performed mainly for voltage management in LV consumers for this study. The behaviour of the system was found to be more rewarding with many electric spring arrangements rather having a single electric spring.

***Keywords: Electric Spring, Low Voltage (LV), Demand Side Management, Renewable Energy Sources, Voltage Regulation, Critical & Noncritical loads***

## **ACKNOWLEDGEMENT**

First and foremost, I would like to express my sincere gratitude to my supervisors Dr. J.V.U.P Upuli Jayatunga & Dr. Thushara Rathnayaka, being my supervisors and giving me the opportunity to carry out the research with continuous guidance. With their support I managed to overcome so many challenges starting from preparing for the project proposal through progress reviews and finally up to the thesis preparation. I take this opportunity to convey my heartfelt thanks for the motivation and timely guidance given to me throughout the project.

I would also like to thank my former masters' programme coordinator Dr. Prasad and all the staff members at department of electrical engineering of University of Moratuwa for providing valuable advice and suggestions in progress reviews.

Secondly, I would also like to remember my parents, my two sisters and all my colleagues for their encouragement & motivation given to me all the time.

# TABLE OF CONTENTS

DECLARATION OF THE CANDIDATE AND SUPERVISORS .....	ii
ABSTRACT .....	iii
ACKNOWLEDGEMENT .....	iv
TABLE OF CONTENTS .....	v
LIST OF FIGURES .....	vii
LIST OF TABLES .....	ix
LIST OF ABBREVIATIONS .....	x
Chapter 1: Introduction .....	1
1.1 Introduction .....	1
1.2 Future Challenges in Power Grid .....	1
1.3 Steady State Voltage Management in LV Networks .....	2
1.4 Research Motivation .....	2
1.5 Research Objectives .....	3
1.6 Outline of the Thesis .....	4
Chapter 2: Literature Review .....	5
2.1 Introduction .....	5
2.2 Overview of Electric Spring .....	5
2.3 Comparison of Electric Spring with Existing Technologies .....	14
2.3.1 Comparison with SSSC .....	14
2.3.2 Comparison with STATCOM .....	15
2.3.3 Comparison with UPFC .....	16
2.3.4 Comparison with APF .....	17
2.3.5 Summary .....	17
2.4 Applications of Electric Spring .....	18

2.4.1 ES to Reduce Energy Storage .....	18
2.4.2 ES for Droop Control .....	21
2.5 Research Gaps .....	24
Chapter 3: Development of a Genetic Electric Spring Model .....	25
3.1 Introduction .....	25
3.2 Example for an LV Network .....	25
3.3 Mathematical Modelling of ES .....	26
3.4 Development of Control strategy .....	30
Chapter 4: Analysis of ES model for voltage fluctuations .....	32
4.1 Introduction .....	32
4.2 ES Model testing scenarios .....	32
4.3 ES Model response for voltage fluctuations .....	34
4.3.1 Simulation results for voltage decrease-testing scenario 1 .....	34
4.3.2 Simulation results for voltage decrease - testing scenario 2 .....	36
4.3.3 Simulation results for voltage decrease - testing scenario 3 .....	39
4.3.4 Simulation results for voltage increase-testing scenario 1 .....	41
4.3.5 Simulation results for voltage increase - testing scenario 2 .....	43
4.3.6 Simulation results for voltage increase - testing scenario 3 .....	45
4.3.7 Summary of Results .....	47
Chapter 5: Analysis of ES model for voltage sags and swells .....	48
5.1 Introduction .....	48
5.2 ES Model response for Voltage sags .....	48
5.2.1 Simulation results for voltage sag-testing scenario 1 .....	48
5.2.2 Simulation results for voltage sag-testing scenario 2 .....	50
5.2.3 Simulation results for voltage sag-testing scenario 3 .....	51

5.3 ES Model response for Voltage swells .....	53
5.3.1 Simulation results for voltage swell-testing scenario 1.....	53
5.3.2 Simulation results for voltage swell-testing scenario 2.....	54
5.3.3 Simulation results for voltage swell-testing scenario 3.....	56
5.4 Summary of Results .....	57
Chapter 6: Sensitivity Analysis with inductive loads & the line impedance .....	59
6.1 Introduction.....	59
6.2 Sensitivity Analysis with Inductive loads .....	59
6.3 Sensitivity Analysis with Line Impedance.....	64
Chapter 7: Conclusions and Future Works .....	67

## LIST OF ABBREVIATIONS

Abbreviation	Description
LV	Low Voltage
RES	Renewable Energy Sources
DPQI	Distributed Power Quality Improvement
FACTS	Flexible Alternating Current Transmission devices
PV	Photo Voltaic
ES	Electric Spring
VR	Voltage Regulation
MS	Mechanical Spring
CL	Critical Load
NCL	Non-Critical Load
SSSCs	Static Synchronous Series Compensators
STATCOM	STATIC COMPensator
UPFC	Unified Power Flow Controllers
APF	Active Power Filter
MV	Medium Voltage
HV	High Voltage
DSM	Demand Side Management
MOSFETS	Metal–Oxide–Semiconductor Field-Effect Transistor
THD	Total Harmonic Distortion
